

Involvement of RNA metabolism in physiological processes: development and response to stress

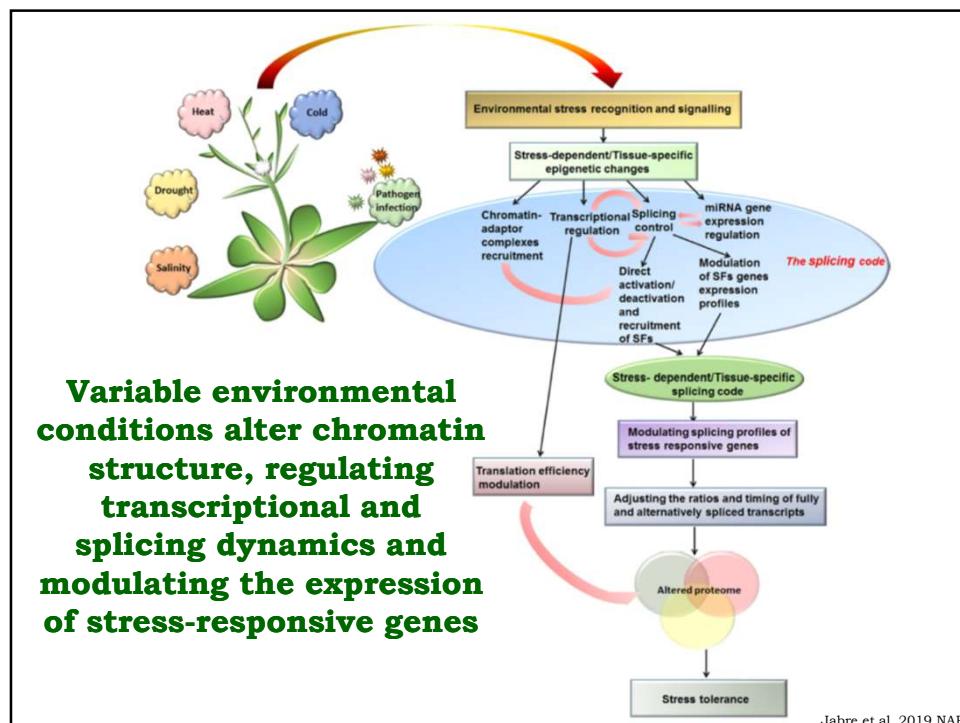

dr Anna Golisz-Mocydlarz

1

Levels of regulation

- I. Chromatin and transcription
- II. RNA processing: pre-mRNA splicing
(alternative splicing - AS) and
3' formation
- III. RNA stability
- IV. Regulation via microRNA and lncRNA

2

3

Regulation of plant metabolism

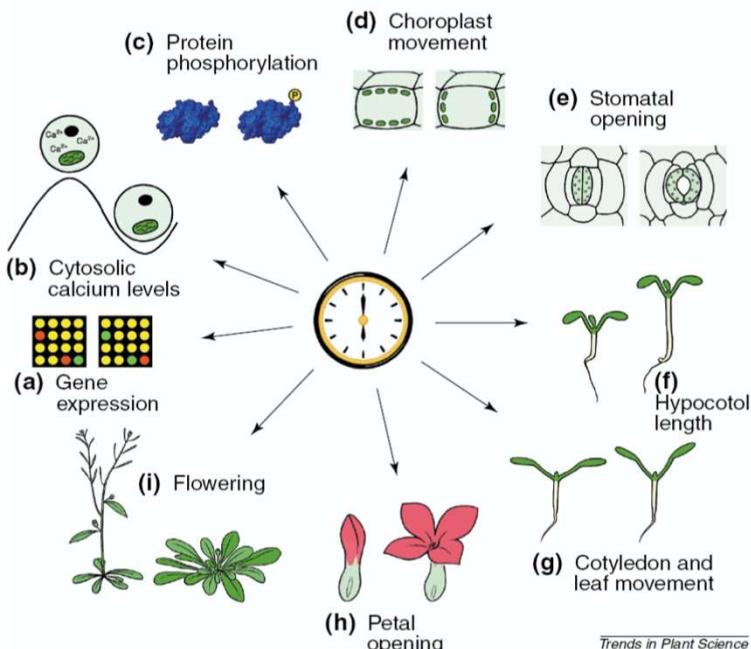

I. Chromatin and transcription

RNA metabolism regulates most of developmental and signaling processes in plants

- Germination
- Circadian clock
- Transition from vegetative to generative development
- Flowering
- Stress response

4

Plant clocks control a plethora of biological processes

Trends in Plant Science

2000, vol. 5, no. 12

5

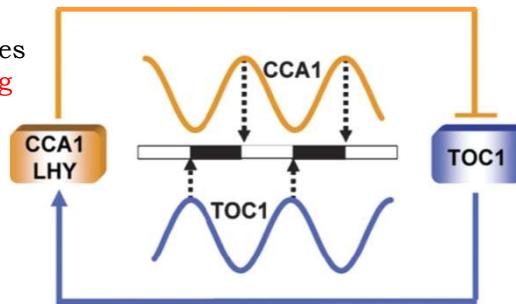

The central oscillator

1) CCA1 – CIRCADIAN CLOCK ASSOCIATED 1 LHY – LATE ELONGATED HYPOCOTYL

- ❖ MYB transcription factors
- ❖ reduction in mRNA levels: negative feedback loop
- ❖ mRNA level peaking at **dawn**

2) TOC1 – TIMING OF CAB EXPRESSION 1

- ❖ TOC1 expression oscillates peaking during **early evening** (opposite to CCA1 and LHY)

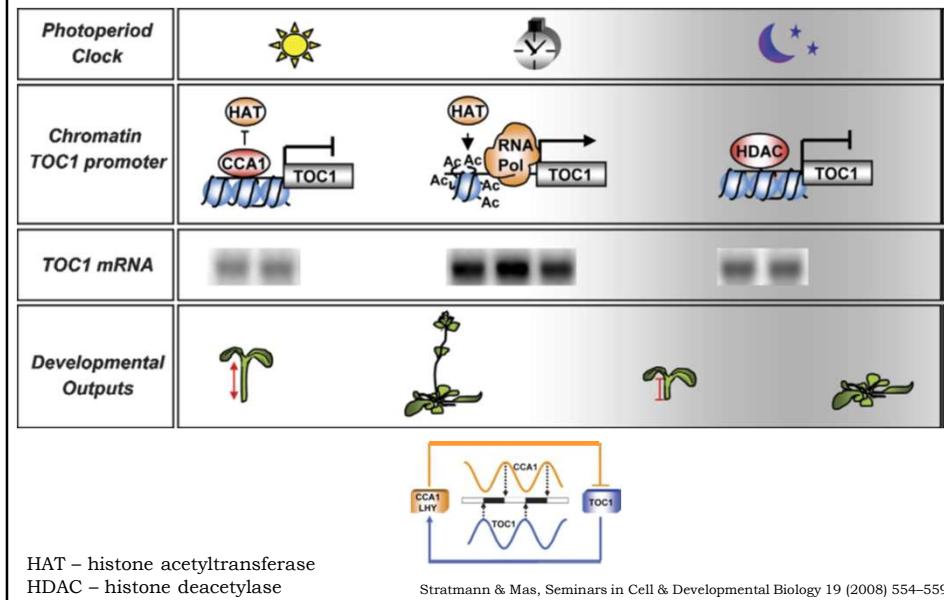

Stratmann & Mas, Seminars in Cell & Developmental Biology (2008) 554–559

6

16

ABSCISIC ACID (ABA)

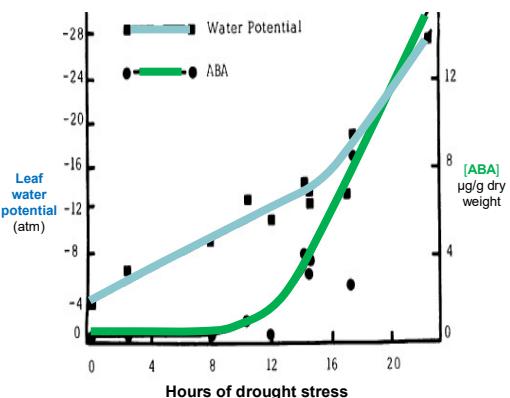

controls many plant processes including stress responses, development and reproduction

Adapted with permission from RIKEN

17

ABA synthesis is strongly induced in response to stress

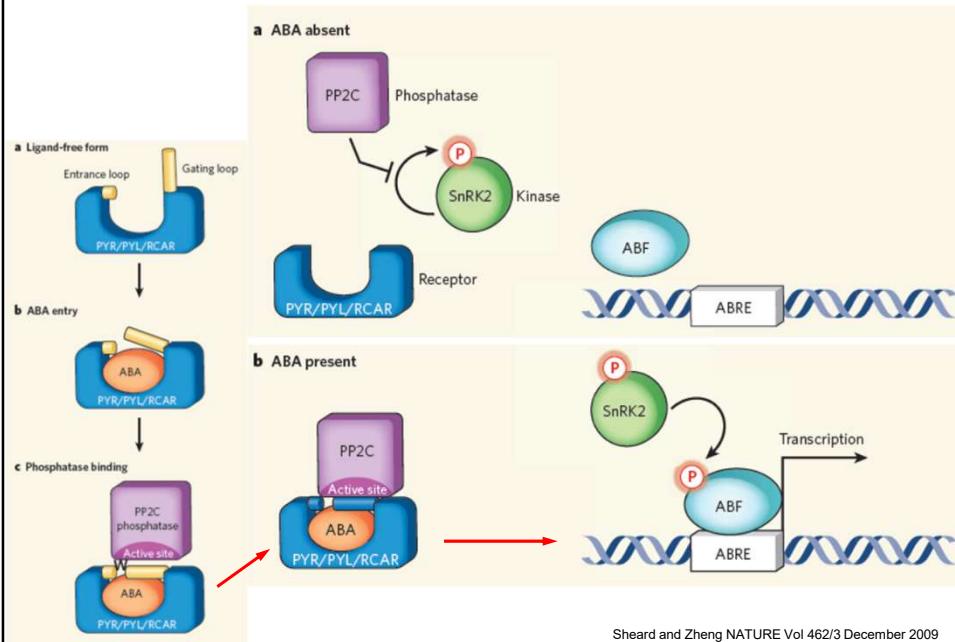

ABA levels rise during drought stress due in part to increased biosynthesis

R.L. Croissant, , Bugwood. www.forestryimages.org . Zabadel, T. J. Plant Physiol. (1974) 53: 125-127.

18

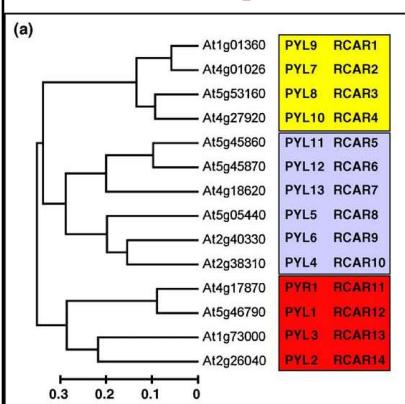

Abscisic acid (ABA) signaling pathway

19

There are many genes encoding PYR/PYL/RCARs

The 14 PYR/PYL/RCARs in *Arabidopsis*

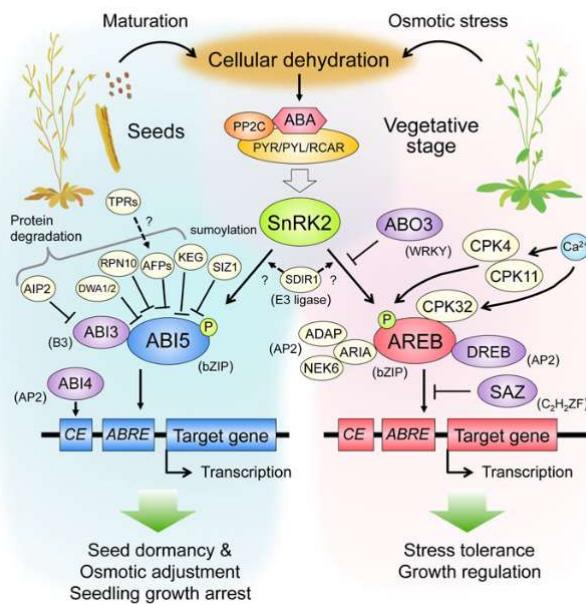

| Common Name | Species | Number of genes |
|----------------------------------|-----------------------------|-----------------|
| Soybean | <i>Glycine max</i> | 23 |
| Corn | <i>Zea mays</i> | 20 |
| Western poplar | <i>Populus trichocarpa</i> | 14 |
| Arabidopsis | <i>Arabidopsis thaliana</i> | 14 |
| Rice | <i>Oryza sativa</i> | 11 |
| Grape | <i>Vitis vinifera</i> | 8 |
| Sorghum | <i>Sorghum bicolor</i> | 8 |
| Barrel medic (a model legume) | <i>Medicago truncatula</i> | 6 |

21

ABA response in RNA metabolic mutants

sad1 – supersensitive to ABA and drought

LSM complex (Sm-like) snRNP proteins
mRNA splicing and degradation

ahg2 – ABA hypersensitive germination

poly(A)-specific ribonuclease **AtPARN**
deadenylation, mRNA degradation

abh1 – hypersensitive response to ABA in germination inhibition

nuclear cap-binding protein **CBP80**
mRNA splicing and stability

los4 – sensitive to ABA and cold

putative DEAD box RNA helicase **LOS4**
mRNA export

iba1 – ABA-hypersensitive seed germination

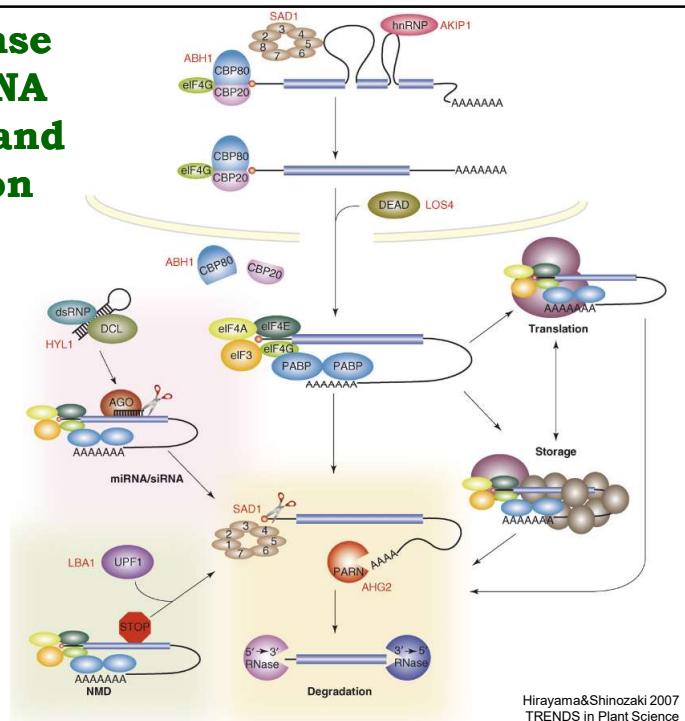

RNA helicase **UPF1** Nonsense-Mediated decay (NMD)
Nonsense-Mediated mRNA decay

hy1 – hypersensitive to salt and ABA

RNA binding protein **HYL1**
miRNA processing and accumulation

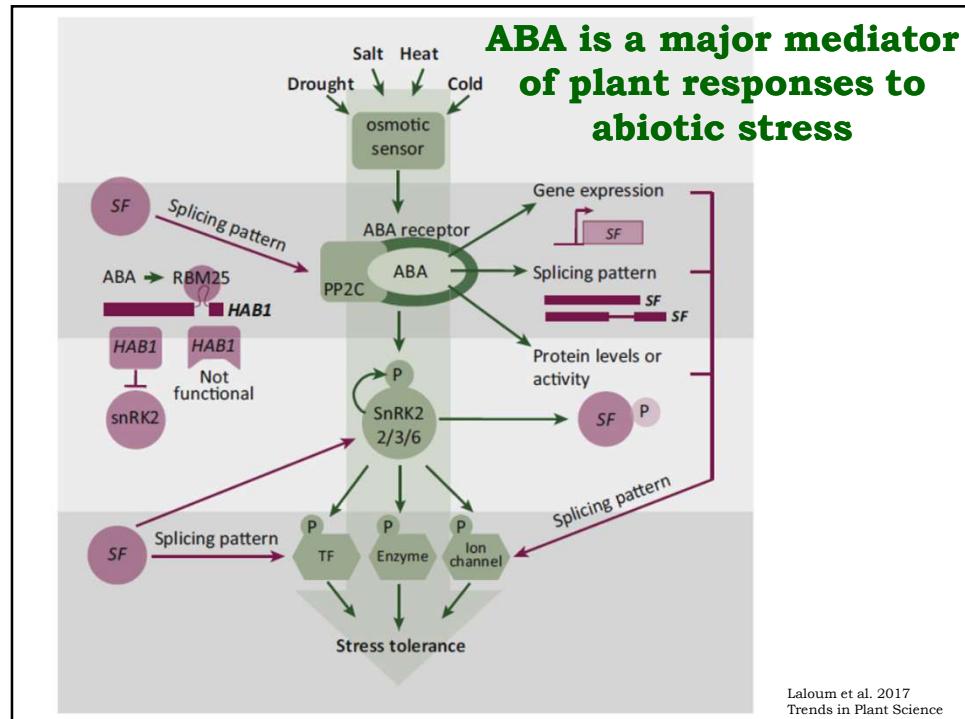

22

ABA response involves RNA processing and degradation systems

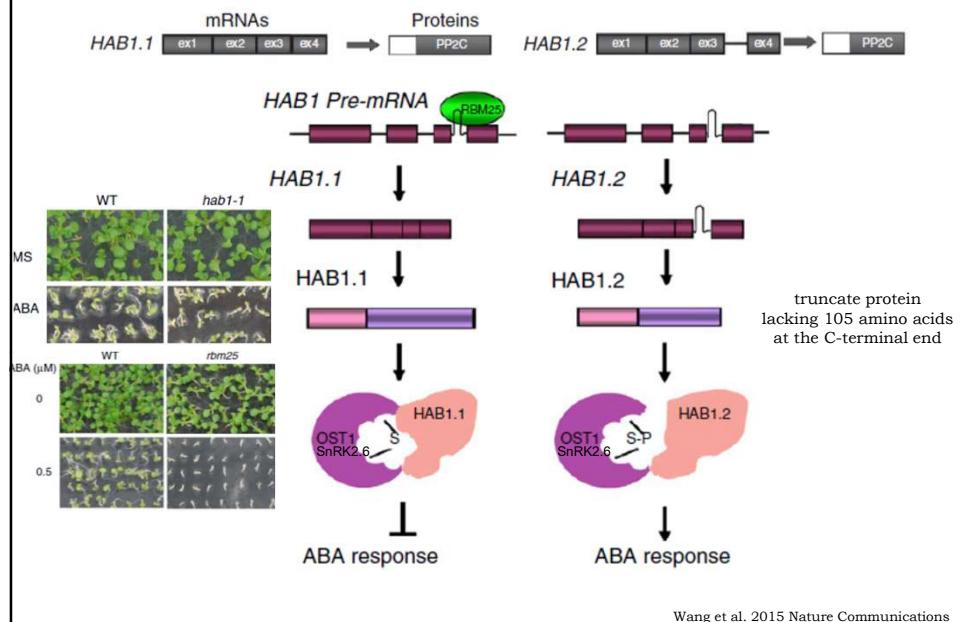

23

ABA is a major mediator of plant responses to abiotic stress

24

HAB1 splice variants control ABA signalling

Wang et al. 2015 Nature Communications

25

Splicing factors involved in plant abiotic stress responses

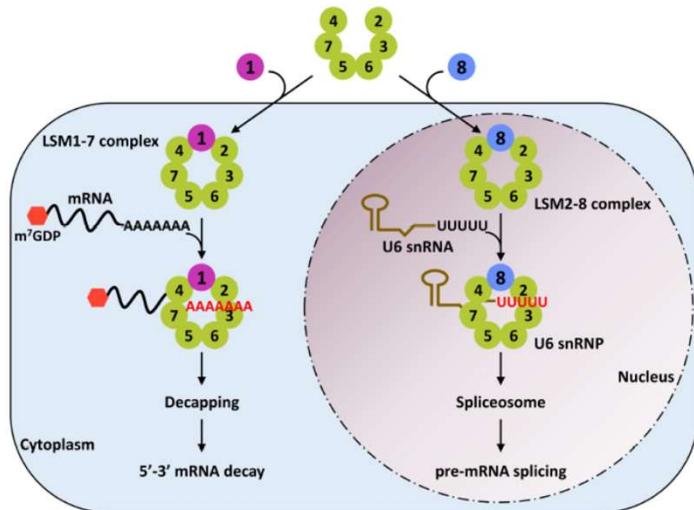

| Splicing factor | | Abiotic stress under which an <i>in vivo</i> role was reported ^a | | | | | |

miRNA as a DECOY in myeloid cell differentiation

► RNA binding protein hnRNP E2 (activated by BCR/ABL kinase in chronic myeloid leukemia patients-CML) inhibits translation of C/EBP mRNA by binding to its 5' UTR. This stops MD

► miR-328 directly binds hnRNP E2 due to sequence similarity to the E2 binding site on C/EBP mRNA

► translation of C/EBP is activated leading to MD

► C/EBP stimulates miR-328 transcription (positive feedback loop for MD fine-tuning)

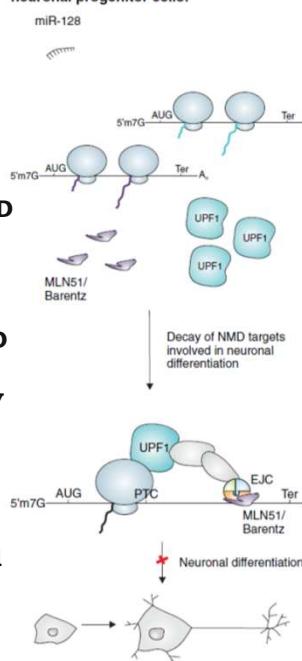

Beitzinger and Meister, Cell, 2010

55

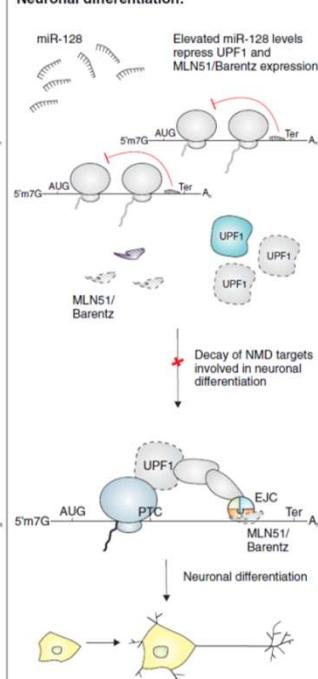

A microRNA/NMD circuit regulates neuronal development

- miR-128 targets the 3' UTR of the central NMD factor UPF1 and the EJC core component MLN51
- downregulation of NMD factors by miR-128 represses NMD activity in human and mouse cells
- miR-128 is drastically upregulated during brain development and neuronal maturation

Undifferentiated and neuronal progenitor cells:
